Impact

Visit to Tumakuru Smart City Integrated Command & Control Center (ICCC) on October 16th & 17th, 2025

A group of students from the Department of Computer Science and Engineering visited the Tumakuru Smart City Integrated Command and Control Center (ICCC) on October 16th and 17th, 2025, as part of an experiential learning initiative linking technology.

During the two-day program, students were given a structured exposure to the functioning of key smart city infrastructure components, including the Data Center, Control Room, Database (DB) Room, and Building Management System (BMS). The visit provided an opportunity to understand how urban data streams from multiple domains—traffic, waste management, water, security, and public grievance systems—are consolidated and monitored in real time through the ICCC platform.

Tumakuru Smart City Limited also conducted a Professional Workshop on Geographic Information Systems (GIS) and Hardware Knowledge Transfer (KT) sessions delivered by Smart City engineers and industry professionals. The workshop demonstrated the integration of GIS mapping and Internet of Things (IoT) devices in city planning, infrastructure surveillance, and emergency response.
